

Dispute Management & Prevention in the Energy Sector

An Examination of Foreign Commercial Arbitration in the Energy Industry

Introduction

The energy sector makes long-term investments in big, intricate, capital-intensive projects. In these energy projects, circumstances, economics, governments, and parties continually change, which can frequently result in disagreements. As a result, the world's greatest portfolio of international commercial and state investment conflicts is comprised of the worldwide energy sector and the construction projects that are affiliated with it.

Thus, disagreements pose a serious risk to any global energy project. The risk in a project is not in the possibility of a conflict but rather in the ability of a party to resolve one through effective dispute resolution.

Therefore, from the time the transaction is made until a dispute develops and is ultimately settled, the parties must continuously manage that risk.

Because of the origins of the parties involved, energy disputes frequently have a significant monetary value, strong public interest, and a cross-border nature. How Alternative Dispute Resolution (ADR) can result in increased procedural flexibility, improved certainty, faster and better outcomes, possible cost savings, and other efficiency. ADR will provide the industry—businesses, regulators, and consumers—more power to steer its own course and develop practical solutions that are tailored to specific situations.

Participants in this Course N Carry training session will have a working grasp of all available ADR options, including early neutral evaluation, expert determination, med-arb, arbitration, mediation, and facilitation.

This training session on Course N Carry will emphasise:

- The primary categories of conflicts in the energy industry
- The available dispute resolution procedures
- ADR's advantages in settling energy-related disputes
- Choosing ADR Approaches and Conducting Conflict Analysis
- Using Better Conflict Management Techniques and Awareness to Prevent Conflict

Objectives

Following completion of this Course N Carry training programme, you will:

- Gain a thorough understanding of the many kinds of energy disputes.
- Recognise the primary dispute resolution provisions in contracts for the energy sector.
- Thorough understanding of ADR mechanisms
- Recognise all available choices for resolving conflicts
- Learn conflict resolution techniques to prevent and resolve energy-related conflicts.

Training Methodology

Presentations by a seasoned worldwide practitioner aim to enlighten and expand the participants' horizons would help them comprehend the subject matter better. We'll review and talk about recent case studies. Participants will take part in interactive talks about managing and resolving disagreements. We will investigate and evaluate dispute avoidance strategies.

Organizational impacts

The following will help the organisation:

- Educating their pertinent staff about the various dispute resolution techniques available to settle energy-related disputes
- Using the Alternative Dispute Resolution procedure can save management time and money when settling disagreements.
- Presenting solutions to high management for resolving energy-related conflicts
- Evaluating and planning the best course of action to prevent conflicts and handle them once they do occur

Personal Impact

Participation in this session will benefit attendees because:
